

Expressing Awakened Global Enlightenment

Through collectively transforming our agreements about what 'reality' is, and what can become possible, we are co-authoring the emergent new story of our world.

We will collectively explore, discover and extend wisdom's potential. The processes we engage in order to experience the far reaches of possibility will include:

- Global Ascent: Integrating, influencing and responding to internal and planetary energy patterns.
- Heart-Rhythm Meditation Technology: Stabilizing and focusing our heart's electromagnetic fields and subtle energy anatomy.
- Interdependence and Self-regulation: Modifying reactivity into creative potential.
- Life purpose exploration: Observing the effects of moving our attention and energy from our solar plexus to our heart chakras.
- Optimism: A choice to become more potent and influential; an understanding of Interdependence and Response-ability.
- Neuroplasticity: Openness, Observation, Objectivity
- Intuition: Through the Science of impression we listen deeply, and learn to see and shape energy.

As a species we can chose to operate from developmental adaptations that react to old ways, or else to express an Awakened Heart-mind Global Enlightenment.

This Seminar is an opportunity to experience at a cellular level what this new expression actually feels like, so we can take the experience with us and replicate it at will.
